Water Resources Assessments & Water Areal Appraisals

**Description and
Background:**

Since 1995, the Operations Division's Hydrologic and Environmental Analysis Branch has produced Water Resources Assessments (WRA) in support of the U.S. Army Corps of Engineers Mobile District's Water Resources Assessment Program, which in turn directly supports the U.S. Southern Command's (SOUTHCOM) Humanitarian Civic Assistance water development program. The WRA summarize water resources information for a selected country in Central or South America. Each assessment includes two topics - Surface Water Resources and Ground Water Resources - with text, tables, and figures. These studies are unclassified, and are shared with the host countries.

Requirements for similar studies have also been completed for CENTCOM and EUCOM countries and regions. These studies are produced as Water Areal Appraisals (WAA).

Current Status:

Complete WRA/WAA are available in soft copy (Adobe Acrobat pdf) on TEC's Intelink-S (<http://www.tec.army.smil.mil>) and Intelink-TS (<http://www.tec.ic.gov>) websites under "Products Available/Water Resources."
